FACULTY OF SCIENCE & TECHNOLOGY

INTERNSHIP AFFILIATIONREPORT ON

Software Quality Assurance Internship at iiniit

An Internship Report Presented to the

OFFICE OF PLACEMENT and

DEPARTMENT OF COMPUTER SCIENCE

In Partial Fulfillment of the Requirements for the Degree

Bachelor of Science in Computer Science & Engineering

Supervised By

Department of Computer Science

Submitted By

SEEMANTA TORAFDAR, ID: 21-45968-3

Summer 2025-2026

Date of Submission: September 5, 2026

LETTER OF SUBMITTAL

5th September 2026

Department of Computer Science

Faculty of Science and Technology (FST)

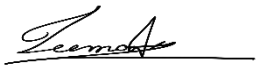

American International University-Bangladesh

Subject: Submission of Internship Affiliation Report on "QA Engineer Intern at iiniit"

Dear Sir,

It is my pleasure to present my internship report on my internship as a QA Engineer Internship at iiniit. This internship has been a milestone towards my academic and professional growth. I was given the responsibility of working as an Intern QA Engineer during my internship at iiniit. As an intern QA Engineer, my primary focus was to test and ensure the quality and functionality of software applications created by the organization. I was also involved in numerous applications and testing projects set by my organizational supervisor, such as Chatsvia, iiniit Accounts, and NetLookup. I was also involved in development and testing of the current Dokho Kormi application. This report provides an opportunity to discuss the chance I had to work as a QA Engineer in a professional software organization, the knowledge and experience I received during my internship. I would also like to thank all those who helped and assisted me during my internship.

Sincerely,

5th September 2026

Seemanta Torafdar

ID: 21-45968-3

Bachelor of Science in Computer Science and Engineering

LETTER OF ENDORSEMENT

The Internship Affiliation Report entitled "**SQA Engineer intern in iiniit**", has been submitted to the Office of Placement and Department of Computer Science in partial fulfillment of the requirements for the degree of **Bachelor of Science in Computer Science and Engineering** by **Seemanta Torafdar, 21-45968-3**. This report is presented to the Internship Defense Committee for evaluation and has been accepted.

Md. Aminul Islam
Internship Supervisor (industry)
Chief Technology Officer (CTO), iiniit

DR. MUHAMMAD FIROZ MRIDHA
Professor Head [Undergraduate Program]
Department of Computer Science
Faculty of Science & Technology

DR. MD. SAEF ULLAH MIAH
Assistant Professor
Director
Faculty of Science & Technology

ACKNOWLEDGEMENT

To begin with, I wish to acknowledge Almighty Allah who has granted me the strength, patience and opportunity to accomplish my internship and to write this report.

I would like to express my heartfelt appreciation to the faculty of science and technology and the department of computer science of the American international university-Bangladesh (AIUB) to incorporate the internship program in the academic curriculum. This experience has enabled me to relate my academic knowledge to practical work and experience a working environment.

I would like to thank my organizational supervisor, Md, with my heart. Aminul Islam, due to his constant guidance, support, positive feedback, and encouragement during my internship at iiniit. His useful tips made me realize the professional software quality assurance practices and enhance my testing, analytical, and problem-solving abilities.

I am also grateful to everyone in the iiniit team who cooperated, helped and provided a friendly work environment. They supported me in becoming more confident as I worked on various testing activities with Chatsvia, iiniit Accounts, Netlookup, and the current Dokho Kormi application. The experience of working with these applications was a great opportunity to gain hands-on experience in software testing and quality assurance.

Lastly, I wish to say a few words of gratitude to all who helped, coached, and motivated me during my internship experience. Their assistance made me achieve my internship and compile this report with more confidence and awareness.

1. INTRODUCTION

The American International University-Bangladesh (AIUB) internship program is a chance that offers students the experience to be applied practically and have an idea of how the academic knowledge is implemented in a working environment. Being a student of the Department of Computer Science and Engineering, I did my internship in the Summer 2025-2026 semester in iiniit as an Intern QA Engineer. As an intern, I was engaged in software quality assurance activities and was able to practice testing various applications and finding problems. The key activities during my internship were based on end to end testing and functional testing of various iiniit products such as Chatsvia, iiniit Accounts and Netlookup. I was also involved in developing and testing a current application called Dokho Kormi. I was tasked with testing authentication and SSO flows, product management, account management, integrations of communication channels, AI-based sales and order flows, tools related to the network, security-related scenarios, and various positive, negative, and edge-case conditions.This internship has enabled me to understand the things I learned in my studies and acquire practical skills in software testing, analytical thinking, communication, teamwork and problem solving. It was also an experience that made me realize professional QA practices and the need to produce quality and reliable software.

1.1. Rationale

This report is intended to showcase my experience in initiative as Intern QA Engineer. The report outlines the various things I did, the testing activities I was involved in, the problems that I faced, and the knowledge I acquired during the internship. It has also given a summary of the organization and the applications I worked on such as, Chatsvia, iiniit Accounts, Netlookup and the on-going Dokho Kormi application. In this report, I intend to illustrate the application of my knowledge in an academic learning environment in a work environment with software testing.

1.2. Background

My internship at iiniit was a privilege, as I got to work there as an Intern QA Engineer. The organization is involved in developing, testing, and enhancing software products and applications. Over the course of my internship, I worked with a few products, learning first hand the process of planning, developing, testing, and enhancing software during the development process. I also got to see how the QA activities are related with the development teams and how right testing can help to find the problem before the software is delivered to the users.

The organization supports a number of applications/services such as:

• Chatsvia: Functional testing and end-to-end testing for product management, profile and business information, WhatsApp and Messenger integration, AI sales and order flows, authentication via iiniit SSO.

• Auth and Account management: I did end-to-end testing of authentication and account management: Registration, Sign In, Google and GitHub authentication, MFA, Account recovery, Session Management, Protected routes, Auth APIs, OAuth 2.0, OIDC and SSO.

• NetLookup: I tried tools for looking up network and security related information, such as IP look up, ping, traceroute, port checking, subnet calculation, DNS Lookup, DNS propagation, WHOIS Lookup, SSL certificate checking, HTTP/security headers, and blacklist / RBL Lookup.

• Dokho Kormi: I am also involved in development and testing of this application which is still ongoing. I support the testing process by testing new features, finding bugs and checking if the functionality implemented meets the expected requirements, since the application is still under development.

As a QA Engineer intern, I interacted with positive, negative, security and edge case scenarios on various features and user flows. I also gained the knowledge of being careful when considering the behavior of systems, expected or unexpected. This experience gave me insights into the value of systematic testing in ensuring software quality and the role of QA in providing reliable software applications.

1.3. Objectives

My primary objective of my internship is to get real-world exposure to software quality assurance and how software testing is done professionally in the real world. This internship is an opportunity for me to put into practice what I learned in the classroom for software projects. I will also work on gaining hands-on experience with functional, end-to-end, authentication and security, integration, and edge-case testing. The second goal is to enhance my software problem detection and problem-solving capabilities, application requirements and working with development teams. Last, I hope to improve my problem solving, communication, team working, time management etc. professional abilities that will help me in my future career in the software industry.

2. ACTIVITIES

As an Intern QA Engineer at iiniit, I had the opportunity to engage in a range of software testing tasks as directed by my organization. Duties involved testing various applications, validating newly created features, finding functional defects and verifying the expected system behavior. I worked on a few products such as Chatsvia, iiniit Accounts, NetLookup doing functional/end-to-end/Authentication/Security/Integration and Edge case testing. I also helped develop and test the current Dokho Kormi app. The activities gave me the opportunity to get hands-on experience with professional QA processes and to develop my analytical and problem-solving skills.

2.1 Work-Related:

Working as an Intern QA Engineer at iiniit I had to test software applications, ensure that the requirements were met, discover defects and determine if the developed software features functioned as required. As a part of my internship I have conducted various testing tasks on the application Chatsvia, iiniit Accounts, NetLookup application and the application under development Dokho Kormi. My principal duties were:

1. Developing test scenarios and test cases from application requirements and user behavior.
2. Running test cases for functional and end-to-end testing to find defects, errors and unexpected system behavior in software.
3. Verifying the reliability of the application and its correct functionality by testing positive, negative, security, integration, and edge cases.
4. Clearly communicate issues identified and coordinate with developers to ensure fixes and retesting of impacted features.
5. Testing authentication features like SSO, OAuth 2.0, OIDC, MFA, login, logout, session handling, protected routes etc.
6. Testing product management, profile and business information, WhatsApp and Messenger integration, AI sales and order flows, and network-related tools.

7. Assisting in the development and testing of new features of the existing Dokho Kormi application and checking whether the features implemented in the application meet the desired requirements.

These roles provided me with valuable hands-on experience in systematic software testing, while also honing my analytical, communication, team collaboration, and problem-solving abilities.

2.2 Organization-Wide:

Working at iiniit gave me an opportunity to learn how various activities are interrelated in a software organisation. As an intern, I was supervised by my organisation supervisor, I was given support from Aminul Islam and supported in carrying out assigned duties. The organization focuses on software development and enhancement in which sustaining functionality and quality is a key aspect of the software development lifecycle. As an Intern QA Engineer, I was in charge of several organizational and departmental related responsibilities such as:

- Adhering to the working and policies of the organization.
- Helping my supervisor and doing what he or she asks me to do.
- Knowing what an application requires prior to testing.
- Testing applications to ensure they work properly, accurately and with quality.
- Providing results of testing and identifying issues with appropriate team members.

As an Intern QA Engineer, I was responsible for the following:

- Analyzing user and system requirements.
- Develop Test Cases and Test Scenarios.
- Functional and end-to-end testing.
- Test authentication, SSO, MFA and security related flows.
- Testing integrations such as WhatsApp and Messenger in Chatsvia.
- Performing API-related and authentication testing were required.
- Testing positive, negative and edge cases.
- Supporting the ongoing Dokho Kormi application testing.
- Support and feedback to my supervisor and development team with testing.

2.3 Other relevant activities:

In addition to my normal QA duties, I was also involved in a variety of other activities that gave me a better understanding of the working environment at iiniit. Communicated with supervisor and team members about tasks assigned, progress of testing, and problems discovered during testing. I learned a lot about the way information is communicated in a software development team and how various team members work together to accomplish their tasks.I also got a bit familiar with the applications and their processes before testing. This was critical as each app had different requirements and user flows. On Chatsvia, iiniit Accounts and NetLookup, I had to try various features and think about various positive, negative, security and edge cases. This helped me to see the app in action from the user's point of view. Another pertinent activity was the support of the testing of Dokho Kormi, which is in the process of being developed. The opportunity to work with an existing application provided me with the chance to see the latest features being tested and how testing can be helpful in uncovering problems in the development process. During these activities, I was able to develop my communication, teamwork, analytical and time-management skills. I also gained insight into the need to ask questions when requirements were not clear and in how to properly communicate testing results. In general, these extra activities made my internship experience more practical, and I adapted to the work of a professional QA environment.

3.CONSTRAINTS/CHALLENGES

While working as an Intern QA Engineer at iiniit, I encountered a few challenges getting used to the professional software testing environment. It was important to observe and learn continuously about real-world requirements, and to test various application workflows. The attention to detail was also necessary for testing authentication, SSO, MFA, integrations, security scenarios, and network-related features. Forced to consider negative and edge case scenarios outside of normal successful cases. While working with the ongoing Dokho Kormi application, one had to also adjust to features that were still in the process of development. The challenges I faced enabled me to develop my analytical thinking skills, problem-solving skills, communication, teamwork, and confidence in performing professional QA tasks.

3.1 Identified/Observed in the Organization

I did my internship at iiniit as Intern QA Engineer under the supervision of my organizational supervisor, Md. Aminul Islam. The work environment was conducive, and when I encountered problems in carrying out the testing tasks assigned to me, I got help. The primary thing I noticed is how crucial it is to have communication between QA engineers, developers and supervisors. There was a need for clear communication regarding requirements, reporting issues and confirming fixes.I also noticed, during my internship, that there is more to testing than just verifying a feature is working in a normal state. When coding Chatsvia, iiniit Accounts and NetLookup, I had to think about positive, negative, security and edge cases. The testing of authentication and SSO was a specific focus as incorrect behaviours could impact user access and account security. I also noticed that for an application like Dokho Kormi which is being built continuously, flexibility is needed in testing as features can change during development.Another significant observation was the importance of careful management of tasks assigned and progress reporting with the team. Over time, I got more comfortable with the professional QA practices with all the guidance and practice. All of this led me to appreciate the value of teamwork, responsibility, attention to detail and the need for constant learning in a professional software organisation. The internship experience overall was conducive to my discovery of improvement areas and understanding of the real-world practice of software quality assurance.

3.2 Academic Preparation

I have always had an interest in working with software developers and learning how software is developed and tested in a professional environment. It was a great experience for me to work as an Intern QA Engineer with iiniit, and it was a great challenge as well. I needed to know about various applications and stay on track with the tests assigned to me and anticipate potential problems. My internship was a great learning experience in software quality assurance and how to do functional and end-to-end testing, create test scenarios, and find issues in newly developed features.My academic work at AIUB gave me the fundamental technical know-how to understand software systems and internship gave me the opportunity to apply this knowledge in practical scenarios. During my time at Chatsvia, iiniit Accounts and NetLookup, I also had the opportunity to work with authentication, SSO, MFA, integration, security scenarios and edge cases. Also, I got a feel for testing in an ongoing development process while working on the ongoing Dokho Kormi application.I had various challenges during my internship, but they were overcome with the support of my supervisor and team members. This experience taught me a lot of knowledge that will be beneficial for my future career as a software quality assurance.

3.3 Personal/Professional Skills

Being an Intern QA Engineer, I understood that technical knowledge is not enough to work in a professional environment. I also had to learn how to communicate, work in a team, manage my time, solve problems and be aware of security. As an intern at iiniit, I was constantly in touch with my supervisor and team members regarding requirements, test results, and issues identified. This gave me more confidence in my ability to explain problems clearly and discuss potential solutions with others. When working on Chatsvia, iiniit Accounts and NetLookup, I had to think about various user flows, positive, negative, security, and edge cases, which helped me develop my analytical thinking. In this process, I also learned some basic security testing techniques, including authentication, authorization, input validation, data protection, and vulnerability checks. This gave me insight to the need of early detection of security risks and how applications need to safeguard user information. Testing the application of Dokho Kormi helped me to be more flexible and patient in dealing with features that were still in the process of development. I also learned about the responsibility of doing the work assigned to me and finishing it on time. I learned to listen to others, ask questions when needed and be professional with other team members. These experiences enabled me to understand my strengths and the areas where I need to improve. The overall experience of the internship was valuable in enhancing my personal, professional and security skills and was helpful for my future career as a software quality assurance.

4.ACQUIRED KNOWLEDGE

An internship is a significant part of an undergraduate degree program as it helps students transition from the classroom to the workplace. As an Intern QA Engineer at iiniit, I had the opportunity to learn hands-on experience through the use of actual software applications and testing various features. I was introduced to functional, end-to-end, authentication, security, integration and edge-case testing. I also enhanced my knowledge of requirements, issue identification, testing communication, and professional QA practices.

4.1 Consequences to Organization

I am thankful to iiniit for providing me with the opportunity to work as an Intern QA Engineer and get hands-on experience in a professional software environment. I got to work on the testing of various applications such as Chatsvia, iiniit Accounts, NetLookup and the existing Dokho Kormi application during my internship. With the help of my organizational supervisor, Md. I learnt how to approach testing tasks carefully and systematically from Aminul Islam. My testing work involved functional requirements, authentication and SSO scenarios, integration and security scenarios and various edge cases. Through these tasks, I was able to contribute to the discovery of unknown behaviors and give the team valuable testing feedback. The experience also gave me an idea of how QA activities can help to enhance software reliability and quality. In conclusion, my internship was a rewarding experience that gave me hands-on experience and the opportunity to participate in the software development and testing process at the organization.

4.2 Implications to University's Internship Program

At American International University-Bangladesh (AIUB), the internship program is a valuable opportunity for students to gain hands-on experience in the workplace before they graduate from their undergraduate programs. Working at iiniit gave me an opportunity to put the knowledge I gained in the classroom to the test in a real-world software quality assurance environment and to learn about the expectations of the software industry. My internship provided me with hands-on experience in testing, which will be valuable for my future career as a QA Engineer. Learned functional testing, end to end testing, authentication, SSO, security testing, integration testing and

edge case analysis. I also gained insight into the process of requirements understanding, issue identification, communication of testing results and collaboration with members of the development team. All these experiences gave me an insight into the difference between academic projects and the professional software development practices. Hence, the internship program is very beneficial as it provides students with technical knowledge, professional communication, team work, problem solving skills and experience of the workplace. My internship overall has helped me to be more equipped for future jobs in the software industry.

4.3 Impact on Personal/Professional Skills

During my internship at iiniit, I gained a number of academic, professional and personal skills as an Intern QA Engineer. The biggest things I noticed that were better are:

- My problem solving and analytical skills were enhanced by identifying and analysing software problems.
- Regular communication with my supervisor and team members improved my communication skills.
- While trying to do several testing tasks, my time-management skills improved.Practical functional, end to end, security and integration testing helped me build my software testing skills.
- Gained a deeper understanding of authentication, SSO, MFA, OAuth 2.0 and OIDC, by testing in practice.
- By working with members of the development team, my teamwork and collaboration skills have improved.
- My adaptability grew as I tested the continuous Dokho Kormi application.I gained in confidence and sense of responsibility by completing assigned QA tasks.

The internship experience was beneficial to me as it helped me build my technical, professional and interpersonal skills and also helped me get ready for my future career in software quality assurance.

5.CONCLUDING STATEMENTS

5.1 Summary

Working as an Intern QA Engineer at iiniit was a great experience to understand the real-world aspects of software quality assurance. In this internship I worked on Chatsvia, iiniit Accounts, NetLookup and also got to work on the development and testing of the current Dokho Kormi application. Did functional, end-to-end, authentication, security, integration and edge case testing. During this time, I was guided and supported by my supervisor and team members, and my technical and professional skills were developed. This report is a summary of my activities, problems, knowledge gained and experience in the internship. It has helped me to be more confident and prepared for my future career of software quality assurance.

5.2 Recommendations/Suggestion for Future Strategic Actions

I gained a lot from my internship experience in terms of learning and enhancing my QA skills. Interns could be provided with opportunities to engage in various testing activities, such as manual and automation testing, to enhance their future internships. Additionally, hands-on experience with API testing, security testing, and real-world debugging would enhance the interns' technical abilities. Frequent feedback from supervisors and increased participation in team discussions might help enhance communication and professional confidence. Interns might also have a chance to comprehend requirements and become involved in discussions about new features. The activities would enable students to bridge the gap between the industry and academics and make them more industry ready.

5.2.1 Organization

The internship experience with iiniit was very valuable and a supportive environment to learn. For example, the organisation could offer interns more opportunities to engage in various phases of software development and QA. Interns might also get more exposure to automation testing, API

testing, security testing, and regression testing, in addition to manual testing. Feedback sessions with supervisors on a regular basis may also be beneficial for interns to understand their strengths and weaknesses. It would be great to have interns participate in requirement discussion and feature reviews, which would help them understand the real world software development.

5.2.2 University

AIUB internship program is an excellent program to gain professional experience. The university could provide more training on how to search for internships, how to write CVs and how to communicate with organizations and understand their expectations. Practical sessions on software testing, teamwork, professional communication and report preparation would also contribute to the preparation of Computer Science students for internships.

5.2.3 Personal/Professional

My internship at iiniit helped me in developing my technical and professional skills. Practically learned the skills of communication, teamwork, time management, and software testing. Working on various applications boosted my confidence. For the future, I would like to work on my automation, security, API testing and problem solving skills for my career.

6. RECOMMENDATION LETTER

iiniit
TECHNOLOGY THAT EMPOWERS
PEOPLE & BUSINESSES

INTERNSHIP VERIFICATION LETTER

Date: 01 September 2026

TO WHOM IT MAY CONCERN

This is to certify that **Seemanta Torafder** is currently working with **iiniit** as a **QA Engineer**. He has been associated with our organization since **10 July 2026**, and his internship is scheduled to continue until **10 October 2026**.

His responsibilities include **software testing, identifying and reporting bugs, regression testing, and verifying fixes**. He is actively involved in testing **Chatsvia**, our SaaS platform, as well as other software products developed by iiniit.

He has consistently demonstrated professionalism, reliability, and strong attention to detail in carrying out his responsibilities.

Sincerely,

Md. Aminul Islam

Chief Technology Officer (CTO)

7. INDUSTRY SUPERVISOR EVALUATION

STUDENT NAME	Seemanta Torafdar	ID:21-45968-3	SEMESTER: Fall 2025-2026

INDUSTRY SUPERVISOR EVALUATION		
Assessment Attribute/Criteria		Missing/Absent (0); Inadequate (1); Satisfactory (2); Excellent (3)
CO1: Perform as an effective individual in multi-disciplinary settings in solving computer science and engineering problems.		
01	Critical Thinking	3
02	Focus on the Task (Self-directed)	3
03	Reflection	3
04	Quality of the Work	3
CO1 Total (out of 12)		12
CO2: Perform as an effective team member or leader in diverse team settings and solving multi-disciplinary problems in computer science and engineering domain.		
05	Taking responsibility	3
06	Contributions	3
07	Collaboration and Ability to Compromise	2
08	Valuing other team members (Working with others)	3
CO2 Total (out of 12)		11

Total Marks CO1+CO2 (out of 24)	23

Reference Guide for Industry Supervisor Evaluation

INTERN-CO1: Perform as an effective individual in multi-disciplinary settings in solving computer science and engineering problems.				
Assessment Attribute/Criteria	Missing/Absent (0)	Inadequate (1)	Satisfactory (2)	Excellent (3)
Critical Thinking	Recalls only functional or procedural knowledge of existing solutions	Explains the existing solutions and applies in multi-disciplinary case settings	Analyses and Evaluates Conditional/ Declarative knowledge with elements in multi-disciplinary settings	Understands the concepts very well and creates new knowledge in multi-disciplinary settings
Focus on the Task (Self-directed)	Never stays focused on the task and what needs to be done	Sometime stays focused on the task and what needs to be done	Most of the time stays focused on the task and what needs to be done	Consistently stays focused on the task and what needs to be done
Reflection	Rarely acknowledges feedback and doesn't	Acknowledges feedback but doesn't	Acknowledges feedback and applies	Acknowledges and analyzes feedback and

	apply strategies for making improvements	apply strategies for making improvements	strategies for making improvements	applies effective strategies for making improvements
Quality of the Work	Provides work that is not up to any quality standard and expectations.	Provides work that usually needs to be checked/redone by others to ensure quality	Provide high quality work. Some small errors that do not interfere with the meaning	Provides work of the highest quality. Work is checked and corrected for mistakes, and shows a high level of effort

INTERN-CO2: Perform as an effective team member or leader in diverse team settings and solving multi-disciplinary problems in computer science and engineering domain.				
Assessment Attribute/Criteria	**Missing/Absent (0)**	**Inadequate (1)**	**Satisfactory (2)**	**Excellent (3)**
Taking responsibility	Does not perform assigned tasks; often misses meetings and, when present, does not have anything constructive to say; relies on others to do the work;	Partially performs all assigned tasks; attends meetings irregularly and occasionally participates and hence not reliable;	Performs all assigned tasks; attends meetings regularly and usually participates effectively. generally reliable;	Performs all tasks very effectively; attends all meetings and participates enthusiastically; very reliable.
Contributions	Never provides useful ideas when participating in a group discussion	Rarely provides useful ideas when participating in a group discussion	Sometimes provides useful ideas when participating in a group discussion	Routinely provides useful ideas when participating in a group discussion
Collaboration and Ability to Compromise	Not cooperative, unable to compromise and disrupts the team process.	Sometimes cooperative, and rarely displays positive attitude.	Usually cooperative, able to compromise and generally displays positive attitude.	Always cooperative. Willingness to compromise. Always display positive attitude.
Valuing other team members (Working with others)	Often argues with teammates; doesn't let anyone else talk; occasional personally attacks and "put-downs"; wants to have things done his way and does not listen to alternate approaches;	Seldom listens to others' points of view; occasionally behaves in an oppressive manner; tries to force own ideologies on other;	Generally, listens to others' points of view; always uses appropriate and respectful language; tries to make a definite effort to understand others' ideas;	Always listens to others and their ideas; helps them develop their ideas while giving them full credit; always helps the team reach a fair decision.

9.APPENDICES

9.1. Internship Schedule and Work Plan

This appendix includes my weekly schedule and task outline during the internship period at iiniit. It highlights the main activities, tools used, and goals achieved throughout the internship.

Weeks	Tasks / Activities	Tools / Technologies Used	Outcome / Learning
1	Introduction To iiniit, company structure, QA responsibilities,and project briefing	QA Testing	Understood the organization, QA responsibilities, and assigned projects
2-3	Tested Chatsvia SSO Login Flow including iiniit SSO redirection, authentication, callback, session, and logout behavior	Manual Testing, OAuth/OIDC	Gained practical experience in SSO and authentication testing
4	Tested Chatsvia Product Management, including product creation, validation, CSV import, product list, editing, and deletion	Manual Testing, Test Cases	Improved functional testing and test-case analysis skill
5-6	Tested Chatsvia Profile, Billing, and Business Information and different validation scenarios	Manual Testing	Improved understanding of form validation and account information testing

7	Tested WhatsApp and Messenger Integration and verified connection and message flows	Manual Testing, Integration Testing	Learned how third-party communication integrations are tested
8	Tested AI Sales & Order Flow and different error and edge-case scenarios in Chatsvia	End-to-End Testing	Gained experience in testing complete customer-to-order workflow
9-10	Performed iiniit Accounts, Authentication Testing, including registration, login, password recovery, MFA, sessions, and protected routes	Manual Testing, Authentication Testing	Developed practical knowledge of authentication and session testing
11	Tested SSO, OAuth 2.0, OIDC, security, and edge-case scenarios in iiniit Accounts	Security Testing	Improved understanding of secure authentication and authorization flows
12	Performed NetLookup testing, including IP lookup, Ping, Traceroute, Port Checker, and Subnet Calculator	Functional Testing	Gained practical experience testing network-related features

13	Tested DNS, WHOIS, SSL Certificate, Security Headers, DNS Propagation, and RBL Lookup in NetLookup	Functional & Security Testing	Improved knowledge of network and security-related testing
14	Participated in development and testing activities of the ongoing Dokho Kormi application	Manual Testing	Learned how QA activities are performed during ongoing software development

Table 9.1: Internship Schedule and Work Plan

9.2. Tools and Technologies Used

- **API Testing:** Postman
- **Project Management:** iiniit Workspace
- **Test Case Management:** iiniit Workspace
- **SSO Testing:** iiniit SSO
- **Communication Tools:** Email, WhatsApp

9.3. Sample Screenshots of Work

Comments

S Seemanta 2 wks ago

@Mamun **Issue:** Google account selection is not displayed when logging in for the second time.

Description: After logging out and attempting to log in again using Google, the Google account selection screen does not appear. Instead, the previously used Google account is automatically selected, preventing the user from choosing a different Google account.

S Seemanta 2 wks ago

@Mamun **Issue:** IINIIT logo does not redirect to the main homepage.

Description: When the user clicks on the IINIIT logo, it does not redirect them to the IINIIT main homepage as expected.

S Seemanta 2 wks ago

@Mamun **Issue:** Google login redirects directly to the User Profile Home page.

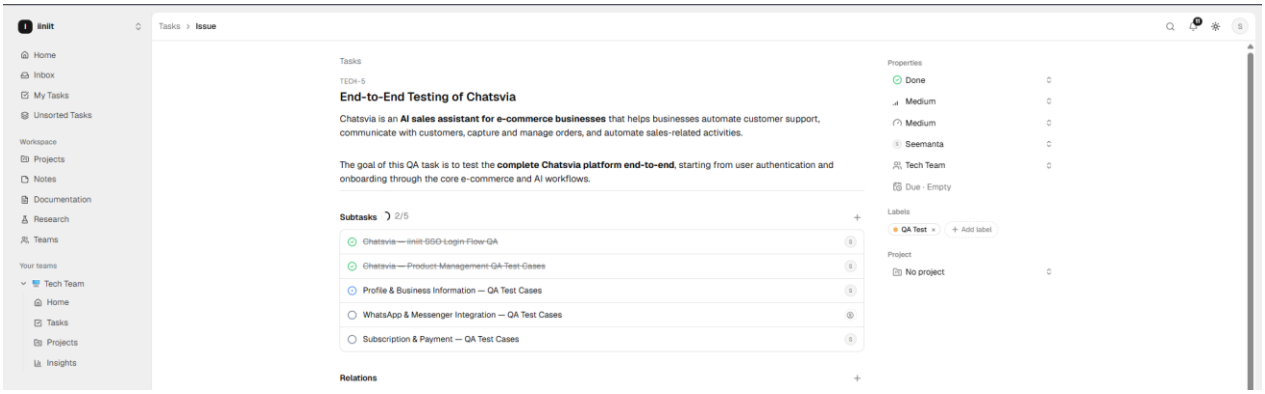

Description: After successfully logging in using Google, the user is directly redirected to the User Profile Home page (`https://accounts.iiniit.com/en/account/home`) instead of being redirected to the expected destination page.

S Seemanta 2 wks ago

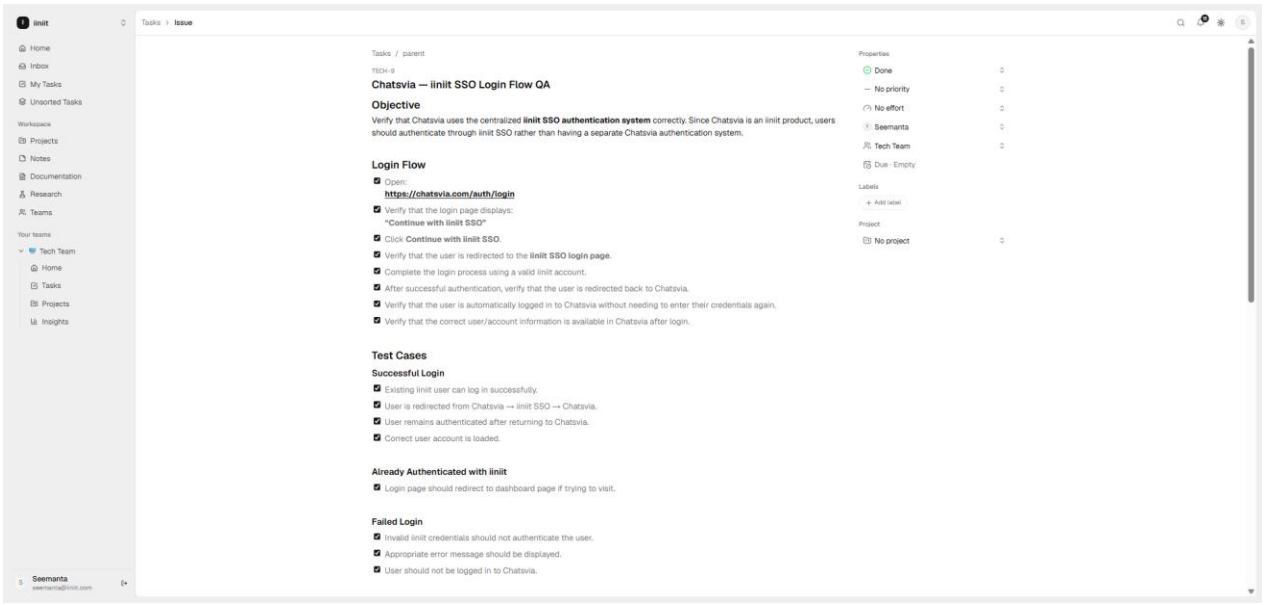

@Mamun **Issue:** Weak password validation is not enforced.

Description: The password field does not display any indication that a password is weak, and there is no requirement for special characters. The system accepts any password containing 8 characters, regardless of its complexity.

Profile

Computer Science and Engineering graduate from American International University-Bangladesh (AIUB) with a strong interest in Software Engineering, Backend Development, Full-Stack Web Development, and .NET technologies. Hands-on experience developing academic projects using C#, ASP.NET Framework, JavaScript, PHP, SQL Server, MySQL, PostgreSQL, HTML, CSS, and Git. Passionate about solving real-world problems, learning new technologies, and building reliable, user-friendly software. Seeking an entry-level Software Engineer, .NET Developer, Backend Developer, Full-Stack Developer, or QA Engineer position where I can apply my technical skills, continue learning, and contribute to impactful software solutions.

Education

Bachelor of Science in Computer Science and Engineering (BSc in CSE)

American International University-Bangladesh (AIUB)

CGPA: 3.17 / 4.00

Higher Secondary Certificate (HSC)

Milestone College GPA:

4.25 / 5.00

Experience

Academic Projects

School Management System

Technologies: JavaScript, PHP, HTML, CSS, MySQL. Developed a web-based system to manage students, teachers, attendance, exams, and notices.

Sundor (Online Jewellery E-Commerce Platform)

Technologies: ASP.NET Framework, C#, SQL Server, HTML, CSS, JavaScript. Developed a responsive e-commerce platform with product management, shopping cart, order processing, admin dashboard, and SQL Server integration.

Gym Management System

Technologies: ASP.NET Framework, C#, SQL Server. Developed a gym management system with CRUD operations for members, trainers, memberships, and schedules.

Cricket Club Team Management System

Technologies: SQL, Database Design. Developed a database-driven application for managing players, teams, match schedules, and statistics.

Skills

Technical Skills

Programming: C++, C#, Java, JavaScript, PHP (Basic)
Frameworks: ASP.NET Framework (.NET), NestJS (Basic)
Web: HTML5, CSS3
Databases: SQL Server, MySQL, PostgreSQL
Tools: Selenium, Telerik
Soft Skills Problem Solving •Analytical Thinking • Teamwork & Collaboration • Communication • Leadership • Time Management • Adaptability • Attention to Detail • Fast Learner

Language Proficiency

Bangla (Native)

English (Professional Working Proficiency)

Hindi (Conversational)

Certifications

Cisco Networking Academy Certification

DICLARATION

I, the undersigned, hereby declare that to the best of my knowledge and belief, the above-mentioned data is correctly described by me.
